

Operators in Python

* Operators are symbols used to perform operations on values or variables

Types:

- * Arithmetic Operators
- * Comparison Operators
- * Logical Operators

i. Arithmetic Operators

- * Addition (+)
- * Subtraction (-)
- * Multiplication (*)
- * Division (/) $\Rightarrow$ (gives quotient)
- * Floor Division (//) $\Rightarrow$ (divides, returns integer)
- * Modulus (%) $\Rightarrow$ (returns remainder)
- * Exponent (**) $\Rightarrow$ (power)

ii. Comparison Operators

- | | |
|--------------------|------------------------------------|
| * Equal to (==) | * Greater than or equal ($\geq$) |
| * Not equal (!=) | * Less than or equal ($\leq$) |
| * Greater than (>) | |
| * Less than (<) | |

iii. Logical Operators

- * and $\Rightarrow$ true if both conditions are true
- * or $\Rightarrow$ True if atleast one condition is true
- * not $\Rightarrow$ Reverse the result

Quiz:

1. Take a number from user and print
 - * is the number greater than 10
 - * is the number equal to 5
2. What will be output?
 $\Rightarrow$ print (7//2)
